GAME TEMPLATES ASSESSMENT

Date set	Week 2, Monday 9 October 2023
Demonstration date	Week 3, Friday 20 October 2023 lab slots
Marks available	20%

For this part of the assessment, you must complete both game templates, following the instructions found in the lab exercises *"Beginnings of a Game"* and *"Improving the Game"*. In doing so, you must follow best practice and keep your code under revision control in a remote `Git` repository. You can learn the basics of using `Git` by completing the lab exercise *"Version Control Using Git"*.

This exercise is worth **20%** of the total marks available for this module. The marks will be allocated according to the table below.

During the scheduled on-line lab slots in Week 3, Friday 20 October 2023, you need to demonstrate your solution to both game templates to a lab tutor, as well as demonstrate that your code is stored in a remote repository.

To summarise:

- All the provided `doctest` tests must pass.
- You are obviously not allowed to modify the tests.
- The entire game code should work as expected, even if not covered by tests.
- The completed game templates must be pushed onto a remote `Git` repository.

Criteria	**Marks**
Solution based on game template **1** ("Beginnings of a Game"):	____ **/8**(†)
Solution based on game template **2** ("Improving the Game"):	____ **/8**(†)
Both solutions are in a remote `Git` repository	____ **/4**
TOTAL	____ **/20**

(†) Marks for the completion of the game templates will be awarded as follows:

If all tests pass and the game template is fully working:	**8 marks**
If at most 3 tests fail, or all tests pass but the game is not fully working:	**4 marks**
If more than 3 tests fail:	**0 marks**
